Worldwide Internet Penetration, 2000-2016

Internet penetration per region*

* The internet penetration per region is weighted by the population per country. Only countries are included for which data was available for the full 2000-2016 period.

** The Gini Concentration Index ranges from 1 (complete inequality) to 0 (complete equality). Thus, a decreasing index over time means that Internet penetration levels are converging among countries in a region. Only countries are included for which data was available for the full 2000-2016 period.
